

## Environmental Policy

*Automobile Club d'Italia, as organizer of Rally Italia Sardegna, continues to work to maintain the FIA 3-star environmental accreditation within the FIA environmental certification framework.*

*The aim is to continue promoting practices that reduce the environmental impact of the event, by adopting measures in accordance with the FIA's environmental strategy, as well as WRC Promoter's tools and guidelines.*

The Sardinia Rally route represents one of the most spectacular scenarios in the World Rally Championship calendar. We are proud to stage the WRC event in a region like Sardinia, but also aware of the potential negative impacts associated with sporting events, such as ours.

The exceptional beauty and the particular fauna and landscape value of the places surrounding the rally stages, led us from the beginning to set up our work according to an event planning and management system aimed at guaranteeing a high level of environmental sustainability of the race and the places involved in the Rally.

Our team works to create the best conditions for enhancing the event with the ambitious goal of raising the environmental performance of the race, minimizing its environmental impact and preventing pollution, according to a principle of “social responsibility” shared at all levels.

According to these considerations, the Organization undertakes to devote all necessary efforts to carry out the following actions:

- Plan all activities in compliance with all legal requirements on environmental protection and management, also in accordance with the FIA environmental certification framework;
- Carry out accurate analyzes for the identification of any environmental risks and for the positive assessment of the environmental impact by the competent bodies and authorities for the issue of land use concessions;
- Reducing and offsetting the CO2 emissions of the event with “Legacy” projects (Environmental restoration of a former landfill).

- Involve all local authorities, especially of the crossing areas of the Rally, in the achievement of common objectives;
- Promote sustainability and environmental awareness among the various actors involved (rally staff, teams, drivers, the public), especially among young people (WRC in schools);
- Prefer "ethically" responsible partners and suppliers, with environmental certifications, and products and services with good environmental performance;
- Promote the separate collection of waste according to specific protocols, with specific guidelines of "good practices" to be adopted, in order to reduce and correctly manage all the materials generated during the event;
- Reduction in the use of single-use plastics, in favor of reusable and recyclable alternative products ( water dispenser, recycled plastic water bottles);
- Promotion of the use of hybrid and/or electric vehicles ;
- Reduce energy consumption by using renewable energy sources where possible;
- Prefer the use and consultation of digital documents, reducing paper ones;
- Disseminate the environmental recommendations on social networks and any other means used to advertise the Rally;
- Prepare an area for washing vehicles that meets the requirements set by the legislation for the collection and recycling of dirty water;
- Restore and clean the competition venues (to make sure there is no damage).

\*The policy reviewed and assessed annually
